

F-5A FREEDOM FIGHTERS 4-PLANE COMPLEX

Marking & Color Painting Guide

4-Plane Complex

General introduction: We through elaborate design and experiment efforts now formally introduce to you this 4-plane complex. It is the first of its kind available in the field considering its easy assembling and creative ideas. We have also exclusive paints ready to match the model planes, making the 4-plane complex the best decorative item.

How to assemble:

1. Cut and finish all parts and components neatly.
2. Assemble B and A by pushing with force the gap of A forward per drawing, but never use any adhesive.
3. Place C₁ at the bottom and C₂ above it. Glue the two pieces at the middle.
4. Place the parts shown in Fig. 3 after assembling on stand shown in Fig. 2, into what you can see in Fig. 4.
5. After the work is satisfactorily completed per Fig. 4, complete the final jog like Fig. 5.
6. Assemble the planes in the order as per Fig. 5. First glue Plane 1), then Plane 2), and so on. Use a clamp when assembling the planes to ensure the best work done.

*If you want to make C₂ longer, take C₃ instead.
