

For a good fit, it will be necessary to clean up the inside of the two fuselage halves as seen here below; use the resin tub to regularly check your progress; filling in the sink marks is not absolutely necessary.

Kit parts 1-5, 9-12 are redundant; we would strongly recommend replacing the overly-thick Airfix clear parts with plunge-molded items. Hold and main access doors are supplied with this set but do note that the access panel lines appearing on the Airfix kit are not 100% correct; use the resin parts as a guides to open up the right-hand fuselage half.
