MODELWORKS www.modelworksprod.com

The Pegasus vehicle is an air-launched space booster created to give small satellite users a cost-effective and reliable method for placing payloads into low earth orbit. The vehicle is produced by Orbital Sciences Corporation and Hercules Aerospace Company.

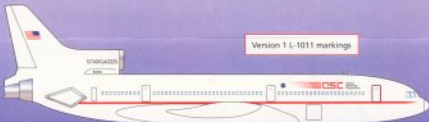

NASA's B-52 was used to launch the Pegasus for the first six launches from 1990 to 1994. After that an Orbital Sciences L-1011 "Stargazer" aircraft launched the Pegasus.

The Pegasus has also been used to gather data on hypersonic flight for NASA.
