

USS ENTERPRISE 1/350 REPLACEMENT SET

This set was designed for the Polar Lights USS Enterprise NCC-1701 model, in 1/350 scale (model # 4204).

1. New Engine exhaust

Cut the molded gluing tabs at the inside of part # 01

Discart model part # 206, and use ours instead.

Some filling will be needed for a perfect blend.

If you want to super accurate the model, you'll also need to thin the molded upper sides of the engine exhaust, to half width.

You can use these templates for painting the part for lighting:

New decals are also provided for the inner grilles.

2. Shuttlebay door

Again, simply discard model part # 31 and use ours instead.

Please note that some filling and sanding will be necessary, to hide the enormous circular seam that exists between parts # 29 and 32.

The part was designed to clip on and off, but some sanding and filling will be needed to achieve a perfect fit.

3. Magnatomic flux construction grille

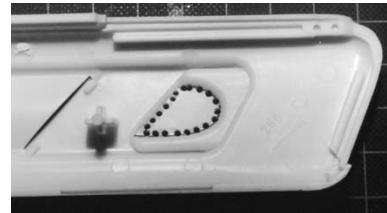

This time, a major surgery must be done, in order to remove the molded grille, and substitute to the new one.

This procedure is fairly dangerous to the model and to yourself ! We recommend it only for experienced modelers ! Work carefully !

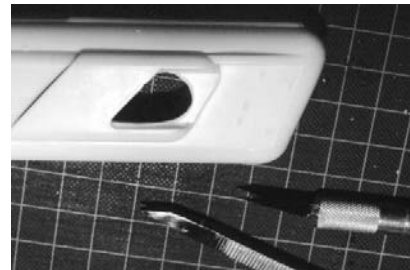

Step one. Mark the part to be removed (work from inside).

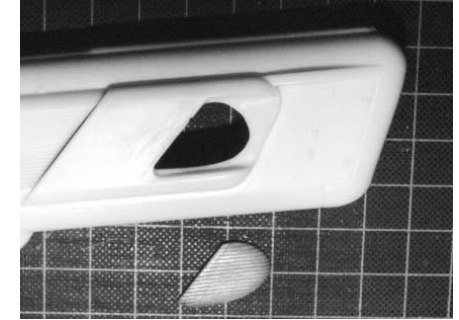

Step two. Drill a series of holes at the part, with a 1.5 mm drill bit.

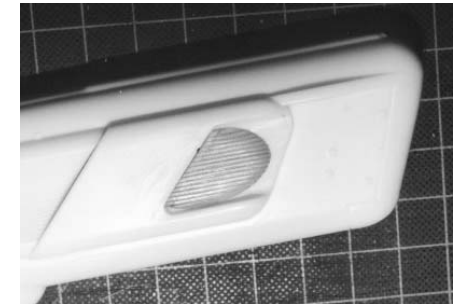

Step three. With a # 22 blade and a Medium/Heavy duty aluminum knife, cut the excess plastic (**do NOT use the # 11 blade, it will break !**).

Step four. Sand the plastic, in order to get an even surface.

Step 5. After painting the warp nacelle, paint the new grille dark cooper, and glue into place

Happy Modeling.
